

A Special Note regarding your Dahlia order . . .

- **Each dahlia tuber will have it's variety name stamped directly on it.** Dust off the peat moss and you will easily be able to tell which dahlia is which by the names stamped on the tuber.
- **Not ready to plant yet?** No problem. Just keep your dahlia tubers in the peat moss in a cool area, that will not freeze, until you are ready to plant them.
- **If your dahlia tubers are sprouting . . .** That is quite normal and will not affect the growth of your plants. We suggest if this has occurred you should trim the sprouts back to approximately 1-2" when you plant.
- Any failures must be reported by August 1st of the same growing season. (Please see Grower's Guarantee and Terms of Sale in the catalog).
- Before calling with questions, please be sure that you have opened and inspected the package and its contents. This will help us to better serve you.

Have a great dahlia summer! Thank you!
